

Control Pressure Module

General Description

The model DSMCPM control pressure Module contains 3 pilot operated solenoid valves. It is designed to operate with Scanivalve's Model DSM3400 Series Digital Service Module and ZOC analog pressure scanners. When the DSMCPM outputs power for any of the 3 solenoid valves to open or close, the appropriate control pressure is output to the ZOC pressure scanner. This, in turn, puts the ZOC calibration valve into either the sense, calibrate, purge or leak test mode.

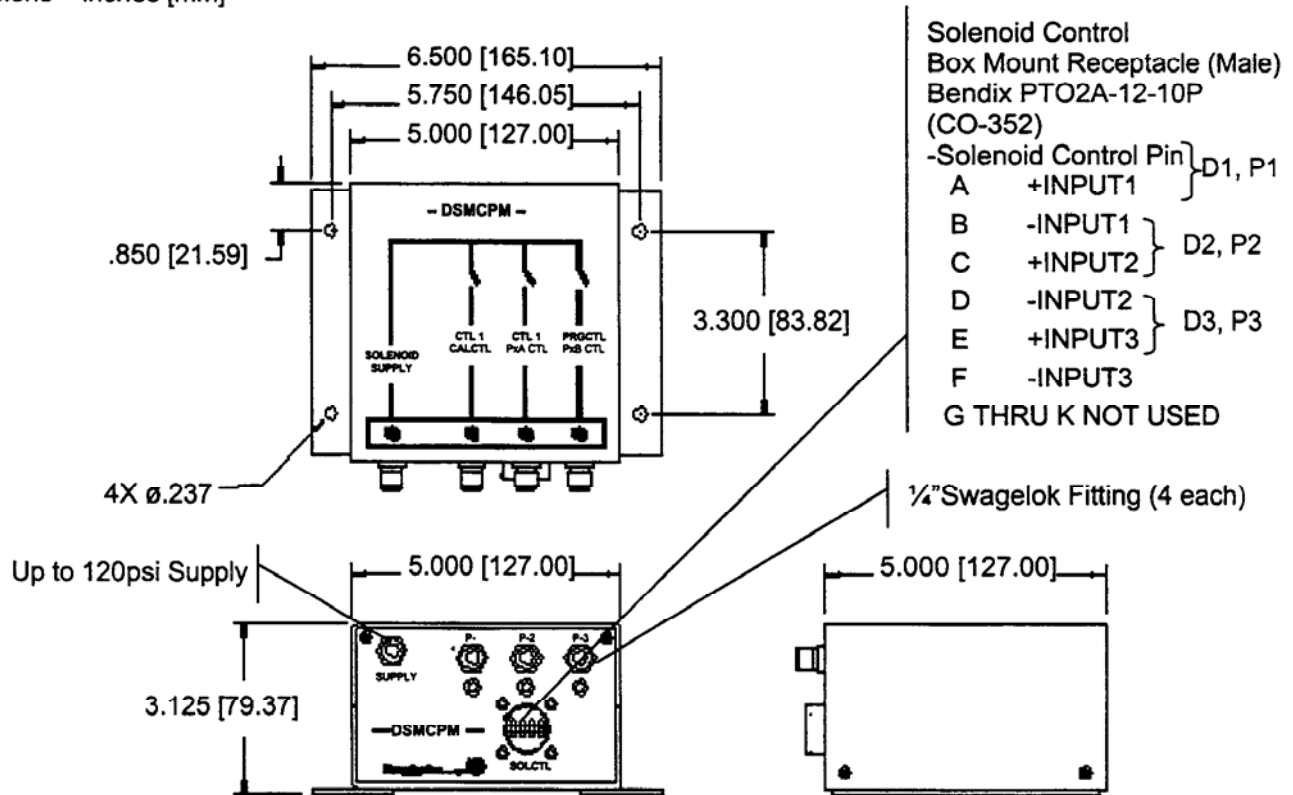

A separate analog cable, Part Number 155662, is required. It includes mating connectors and has a standard 3 ft length. Optional lengths can be specified.

The DSMCPM works with all DSM series products.

Ordering Information:

DSMCPM (specify 28Vdc or 12Vdc)
Analog Cable, P/N 155662 (specify length)

Dimensions = inches [mm]
