DSI\$3217/3218-PTP

Scanivalve

Digital Sensor Array

Ethernet Pressure Scanner

Features

- · Intelligent pressure scanner
- "Network Ready" Ethernet TCP/IP, FTP & UDP
- 850 samples/channel/second EU
- ±.05% full scale long term accuracy*
- 0 750 psi pressure range
- Temperature compensated pressure sensors
- Dual pressure ranges available
- IEEE1588-2008v2 PTP compliant
- Drop-in replacement for DSA3200 series scanners

General Description

The DSA3200-PTP series pressure scanners are versatile, all-in-one data acquisition systems. Each DSA3217/3218 -PTP is built on a pressure sensor per measurement channel architecture. Every pressure sensor is uniquely calibrated over a wide temperature range. All data acquisition, data conversion and communications tasks are handled by the integrated A/D converters and processor. This combination provides easy setup, simple operation and long term reliability.

In addition to the electronics, internal calibration valves are included to provide maximum functionality. The valves allow for several logic states including measurement, isolate, calibrate and purge. In the calibration configuration, either a known pressure can be applied for a span verification/correction, or the sensors can each be pneumatically shorted together allowing for a quick zero offset calibration. This zero offset calibration feature, in conjunction with the sensor's natural stability and repeatability combine to provide maximum long term accuracy.

Once processed, the DSA-PTP outputs the data in either ASCII or Binary format over the Ethernet network TCP/IP or UDP. The DSA-PTP can be setup and all configuration variables can be set over the same Ethernet connection.

The result of the DSA-PTP's careful design is a complete package that makes multi-point pressure acquisition tasks simple. The DSA-PTP's functionality and flexibility make it an excellent fit for a wide range of applications.

DSA3217-PTP (shown)

Applications

The DSA3200-PTP series is available in two basic configurations; the DSA3217-PTP and the DSA3218-PTP. Both configurations offer the same functionality, but differ in packaging and intended applications. The DSA3217-PTP is enclosed in a stainless steel, splash resistant enclosure intended for most laboratory, educational or other controlled environments. The DSA3218-PTP however, is enclosed in a stainless steel, splash resistant, shock mounted enclosure with Swagelok® fittings on all pneumatic connections. It is intended for applications such as gas turbine testing, flight testing, industrial applications and other more rugged environments.

Additionally, the DSA3218-PTP series offers an optional heater or cooling kit, allowing the DSA-PTP to operate in a much wider temperature range. This allows for year-round operations in open test cells, close-coupled mounting to gas turbine tests, elevated temperatures for Freon testing or any other environment where temperature extremes will be seen or rapid temperature changes are expected.

Again, the DSA3200-PTP's features and options offers support for a wide range of applications and uses. The all-in-one packaging makes configuration easy and operations simple.

DSA3217/3218-PTP Features

Calibration Valve

The DSA3217/3218-PTP calibration valve is "Normally Px" where no control pressures or a loss of control pressure defaults the valve to the operate (measure) mode. 90 psi control pressure is required to switch the DSA-PTP calibration valve into purge, calibrate or isolate mode. Each of these states can be established during a test with measurement pressure applied. This flexibility allows the DSA-PTP to be calibrated online with either a zero or multipoint calibration.

An internal solenoid valve is utilized for performing quick zero calibrations without the use of a pressure calibrator. When actuated, the positive side of the pressure sensor is pneumatically shorted to the reference manifold, creating a zero differential. The sensor offsets are then updated and saved in EEPROM.

Sensors - High Accuracy, Long Term Stability

Each DSA3217/3218-PTP silicon pressure sensor is thermally compensated and packaged in its own rugged field-replaceable housing. The transducers are factory calibrated over their full pressure and temperature ranges. The resultant calibration data are stored in a 72 plane pressure/temperature look-up table in EEPROM.

As the sensed sensor bridge temperature changes, the microprocessor selects the appropriate temperature plane

or interpolates between planes to correct the pressure reading. This on-line temperature correction and quick zero calibration corrects for inherent zero drift and temperature sensitivity, thus assuring a long-term 6 month accuracy of $\pm .05\%FS$ (typical).

Configurations

DSA3217-PTP and DSA3218-PTP modules can be configured to specifically fit each unique application. A wide variety of pneumatic configurations as well as interface options and environmental options are offered.

Pneumatic Configurations

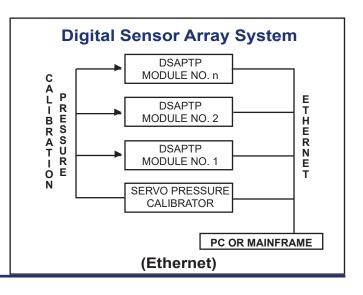

Standard DSA-PTP modules come with the reference side of all 16 transducers manifolded to a single reference port. If the DSA is ordered as a dual-range unit, a reference is provide for each range. As an option, the DSA can be configured with individual reference ports for all 16 channels. For more flexibility when differential measurements are required, both DSA3217-PTP and DSA3218-PTP modules can be offered in 8 channel "True Differential" configurations which provides inputs and calibration valves on both sides of each individual transducer.

Interface Options

DSA3218-PTP modules come standard with 1/8" Swagelok® fittings. These can easily be substituted with 1/16", 1/4" or 6mm Swagelok® fittings.

Environmental Options

The DSA3218-PTP is designed for rugged environments, but to supplement this capability the DSA3218-PTP can be offered with a self-controlled internal heater, or input and exhaust ports for cooling. Depending on the environment, DSA-PTP modules with heaters can be operated in ambient temperatures down to -55°C. DSA-PTP modules with cooling kits can be operated to ambient temperatures of 80°C, provided sufficient cooling air flow is provided.

DSI\$3200-PTP System / Specifications

Communications

The DSA3217/3218-PTP module interfaces directly to a host via an Ethernet connection. Scanivalve's free Configuration Utility software for LabVIEW® Runtime is designed to assist a user in establishing communications and configuring the DSA-PTP

module. Additionally available is a Software Development Kit for users who want to write their own detailed data acquisition program in LabVIEW®. This Development Kit includes the Configuration Utility software and examples to assist a user in the setup of the system. An OPC driver is also available.
